

WE ARE LOOKING FOR A

## Server-side Engineer (m/f/d)

Location: Remote (Comparable time zone to CET), full-time

### About VRdirect

We are a Munich based tech-company with the mission to democratize the Metaverse. Virtual Reality – as proven technology – paves the way for our enterprise customers to easily access innovative ways of working and it drives efficiency for a lot of business processes.

Check out how this looks in daily business [here](#) and if you want to dig deeper into how our platform looks like, just visit: <https://www.vrdirect.com/platform>

### Help us improve our product by:

- » Developing internal and public APIs
- » Maintaining and growing our server infrastructure
- » Monitoring and improving the availability and security of our services

### Qualifications:

- » 3+ years experience in software development
- » Experience building and maintaining APIs
- » Fluent in at least one object oriented language (Java, Typescript, C#, C++, ...)
- » Firm believer in clean code practices and familiarity with automated testing solutions
- » Experience with CI/CD and other DevOps practices
- » Practical knowledge of server infrastructure
- » Excellent communication and documentation skills

### Nice to have:

- » Experience developing NodeJS server API
- » Experience with Azure infrastructure, and/or infrastructure as code frameworks
- » Experience with video and audio encoding techniques
- » Experience working remotely
- » BS/MS degree in Computer Science / Engineering
